Summary

Intergenerational rigidity in the wealth distribution

- 10 percentile change in parental wealth associated with 4 percentile change in children's wealth
- Large racial gaps
  - Not just in wealth attainment but also intergenerational wealth transmission
- ► Wealth inequality in education is one of the main channels through which wealth is transmitted across generations

## Sample

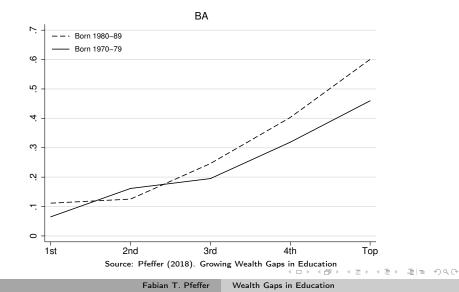

- ► Children born in 1970s and 1980s
- ► Family wealth, measured at
  - children's ages 10-14
  - ightarrow ightarrow first PSID wealth waves (1984, 1989, 1994, 1999)
- Educational attainment, measured at
  - ► age 20: high school graduation & college access
  - ► age 25: college graduation

#### Growing Wealth Gaps in College Persistence

#### More Students, and Yet...

For the poorest wealth group, college attendance has risen, but college graduation has not.

- - - Share of wealth group attending college ---- Share graduating

Note: Wealth categories are based on a person's parents' wealth when the person was 10-14 years old. Lowest wealth group is the bottom 40 percent of households; middle wealth is the middle 40 percent; upper wealth is the top 20 percent. Educational outcomes are at age 25. ◆□ ▶ ◆□ ▶ ◆ □ ▶ ◆ □ ■ ■ ● ● ● ●

#### Extension 1: Extended Family Wealth

Family members besides parents contribute

► see e.g. college grandparental visit days

Evidence

- Three-generational wealth correlation also driven to a large extent by education (Pfeffer/Killewald 2018)
- Uncle/aunt wealth as independent predictor of educational attainment (Prix/Pfeffer 2017)
- Direct effects of grandparental wealth on children's educational achievement even in Sweden (Hällsten/Pfeffer 2018)
  - Independent contribution of grandparental wealth as large as that of parental wealth
  - Adjusted GPA gap between children from bottom vs top (P10-P90) of grandparental wealth distribution: 10 percentiles

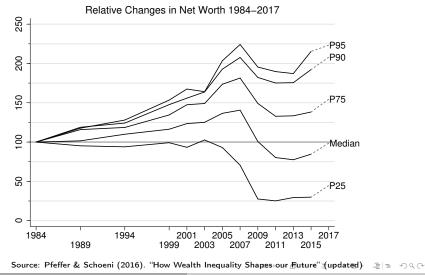

イロト (母) (ヨト (ヨト ヨヨ の)()

## Extension 2: Wealth Gaps in College Types

- ► Association between college type and parental wealth
  - ► Jez (2014): Parental wealth correlates with college selectivity
- Implications for trends in wealth gaps
  - Underestimated? Growing wealth gaps in college types? (Pfeffer/Vasquez ongoing)
  - Explained? Growing wealth gap in college persistence as an institutional effect (type of institution)?

Sample Changing Wealth Gaps in Education Extensions

#### Extension 3: Trends in Wealth Inequality

Fabian T. Pfeffer Wealth Gaps in Education

▲ ■ ▶ ▲ ■ ▶ ■ ■ ■ ● ● ● ●

#### Extension 3: Trends in Wealth Inequality Among Children

Gini coefficient of children's family wealth

- ► Growing up in 1980s: .72
- ► Growing up in 1990s: .80
- ► Growing up today: .88

But

 Prior increases in wealth inequality account for only a small part of the increase in wealth gaps in education

# Summary

- ► Wealth gaps in educational attainment are large
  - ► Across all levels of education, but particularly college outcomes
  - Even conditional on family income and other characteristics (not shown)
- ► Wealth gaps in educational attainment have
  - $\blacktriangleright$  grown for college attainment, driven by children from top 20%
  - $\blacktriangleright$  despite signs of decreasing wealth gaps in HS & college access
  - $\blacktriangleright \rightarrow$  large increase in wealth gap in college persistence
- Wealth gap in college and its growth may be even more significant, when we consider
  - extended family wealth
  - college types
  - more recent cohorts as they grow up more unequal

Intergenerational Wealth Persistence	Purchasing Function
Wealth Gaps in Education	Insurance Function
Mechanisms	Summary & Conclusion

Why?

### Understanding Wealth Gaps in Education

How family wealth translates into educational inequality

- 1. Purchasing Function
- 2. Insurance Function

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のQ@

#### Purchasing Function: Evidence

#### Wealth supports investments in educational opportunity

- Over the last decades, parental investments in children have become
  - ► larger (Kornrich and Furstenberg 2012),
  - ► more unequal by income (Schneider et al. 2018) and wealth (Rauscher 2016)
- ► Wealth reduces credit constraints to access college
  - ► Housing bubble-induced increase in home equity increased college-going (Lovenheim 2011)

◆□▶ ◆□▶ ◆□▶ ◆□▶ 三回 の ()

Purchasing Function Insurance Function Summary & Conclusion

#### Purchasing Function: Ongoing Work

Parental Housing Wealth & College Outcomes 0.8 0.7 College Access (Homeowners) 0.6 College Access (Non-Homeowners) 0.5 Rates 0.4 0.3 **College** Completion (Homeowners) 0.2 College Completion (Non-Homeowners) 0.1 0 1950-54 1955-59 1960-64 1965-69 1970-74 1975-79 1980-84 1985-89 Birth Cohorts

Fabian T. Pfeffer Wealth Gaps in Education

5900

## Purchasing Function: Ongoing Work

Estimating Effects of Housing Wealth on College Outcomes (Pfeffer/Burland ongoing)

- ► Re-Authorization of Higher Education Act (HEA) of 1992
  - Policy discontinuity: Exclusion of home equity from the calculation of financial aid (see also Dynarski 2003)
- ► Preliminary results from difference-in-difference models
  - Policy change increased the home ownership gap in college access by 5-8 percentage points

イロト (母) (ヨト (ヨト ヨヨ の)()

#### Insurance Function

**Definition:** Potential to buffer the socio-economic and socio-psychological consequences of negative outcomes in the attainment process

- "real and <u>psychological</u> safety nets" (Shapiro 2004)
- ► "consumption <u>potential</u>" (Spilerman 2000)

**Challenge:** No actual transfer needed for effects to emerge

E OQO

#### Insurance Function Summary & Conclusion

## Insurance Function: Evidence & Ongoing Work

#### Adding credibility to the insurance function

- Similar associations between family wealth and educational outcomes in contexts with limited need for wealth's purchasing function
  - Germany (Pfeffer 2011)
  - Sweden (Hällsten/Pfeffer 2017)
- Safety net in action:

Wage scars of youth unemployment in Sweden (Pfeffer/Hällsten ongoing)

- Children from wealthy families do not incur wage scars post-unemployment
- but their parents incur a wealth scar

◆□ ▶ ◆□ ▶ ◆ □ ▶ ◆ □ ■ ■ ● ● ● ●

# Summary

#### Purchasing Function of Wealth

- Increased investment in children, increasingly met by wealth
- Housing wealth as important dimension of growing gaps
  - Reactive to economic shocks (recession) and policy (HEA)
- Insurance Function of Wealth
  - Wealth as private safety net where risk is involved (such as educational decisions)
  - Potentially more universal mechanism, including in more egalitarian countries
    - Even in Sweden, effect on educational achievement and later labor market careers

◆□ ▶ ◆□ ▶ ◆ □ ▶ ◆ □ ▶ ◆ □ ▶ ◆ □ ▶

## Conclusion

- Wealth inequality has been on the rise
   and so has wealth inequality in educational outcomes
- ► Wealth gaps in education may be and may become even larger
- Policy can influence these gaps
  - ► Did so successfully in the past, but in the wrong direction
  - Addressing families' insurance needs requires yet larger interventions
- Barring those interventions, the wealth distribution will become more rigid across generations
