

The Role of Education in Wealth Accumulation

Education and Wealth: Correlation Is Not Causation

Education and Wealth: Correlation Is Not Causation

- Educational attainment and wealth are highly correlated.
- But some of the education-wealth correlation is *spurious*—that is, not *causal* but due instead to *other factors* that affect *both* education and wealth.
- In addition to wealth, education also is correlated with:
 - Income, financial decision-making, inheritances
 - Child’s education, socio-economic status, race/ethnicity
 - Health behaviors, morbidity, mortality
- A college degree itself does not magically confer all of the benefits that college grads typically enjoy—financial success requires more than a sheepskin.

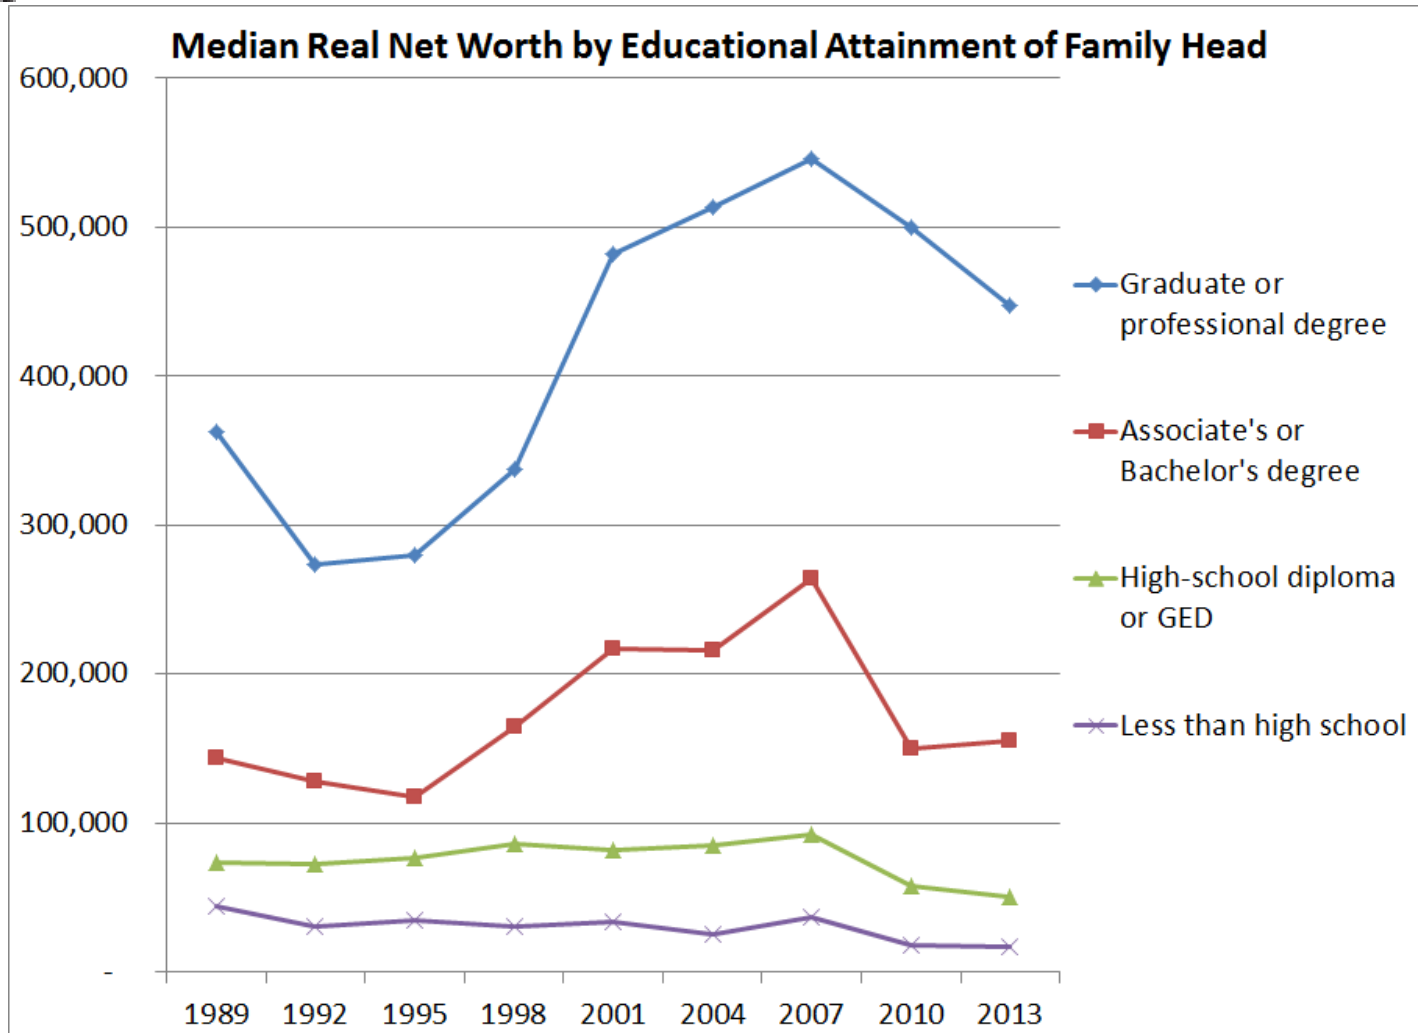

Educational Attainment Predicts Median Family Income

How Are Education and Wealth Related? Common Fallacies

- **“If you get a college degree you will be rich; with a post-graduate degree you’ll be even richer.”**
 - **Not necessarily—We observe a correlation but cannot determine causation.**
- **“If we could send everyone to college we would eliminate wealth disparities.”**
 - **Probably not—Not everyone can (or wants to) complete college.**
 - **Wealth disparities are very large among college grads, too.**
- **Education and wealth are related but exactly how is very complicated!**

An Illustration of Spurious Correlation: Education and Inheritance

Source: Federal Reserve Board, Survey of Consumer Finances

Correlation vs. Causation

- Does more education *cause* more inheritances?
- Do inheritances *cause* more education?
- No to both—or not by themselves.
- Rather, people who are more educated tend to have parents who also are more educated and wealthier.
- Education is one input—among many—into wealth accumulation.
- There are many determinants of educational attainment, too.

Six Sources of the Partially Spurious Correlation Between Education and Wealth

1. Inheritances: Better-educated people are much more likely to receive sizable gifts or inheritances simply because they are more likely to have better-educated, higher-earning parents who have accumulated wealth.

Bottom line: Educated parents produce both educated offspring and wealth that can be passed down.

Six Sources of the Partially Spurious Correlation Between Education and Wealth

2. *Natural abilities*: People with higher natural cognitive and non-cognitive abilities are more likely to complete higher levels of education.

At the same time, measures of cognitive and non-cognitive ability also predict success in achieving higher social status, avoiding poverty and criminality, enjoying better health and achieving greater longevity.

Bottom line: More-talented people get more education and do many other things that can lead to greater wealth.

Six Sources of the Partially Spurious Correlation Between Education and Wealth

- Family background**: The parents' socio-economic status (social class, occupation, education, income, wealth) contributes to the child's success as an adult in many different ways.

Bottom line: High-status children get more education and enjoy other economic and financial benefits.

Six Sources of the Partially Spurious Correlation Between Education and Wealth

4. *Assortative mating* (“*like marries like*”): The link between education and earnings and the tendency for highly educated people to marry each other effectively doubles the college wage premium for these families. Financial decision-making also may be improved with two educated spouses.

Bottom line: Your education creates wealth and attracts an educated spouse.

Six Sources of the Partially Spurious Correlation Between Education and Wealth

- Incentive to become financially knowledgeable:**
High-earning families have a strong incentive to learn how to shift middle-age income into retirement.

Bottom line: High income during working years creates wealth and spurs financial learning.

Six Sources of the Partially Spurious Correlation Between Education and Wealth

6. *Better health and longer lifespans:* People who get more education are healthier, on average.

Better health extends working lives and lengthens healthy retirement years.

Longer-lived people collect more from Social Security and private pensions and their investments have more time to grow.

Bottom line: People who get more education tend to be healthier and wealthier.

Correlation vs. Causation: Three Theories

Theory 1

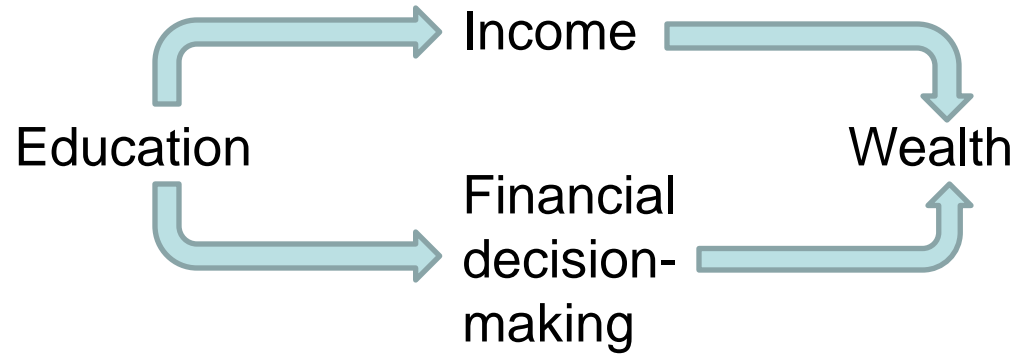

Correlation vs. Causation: Three Theories

Theory 1

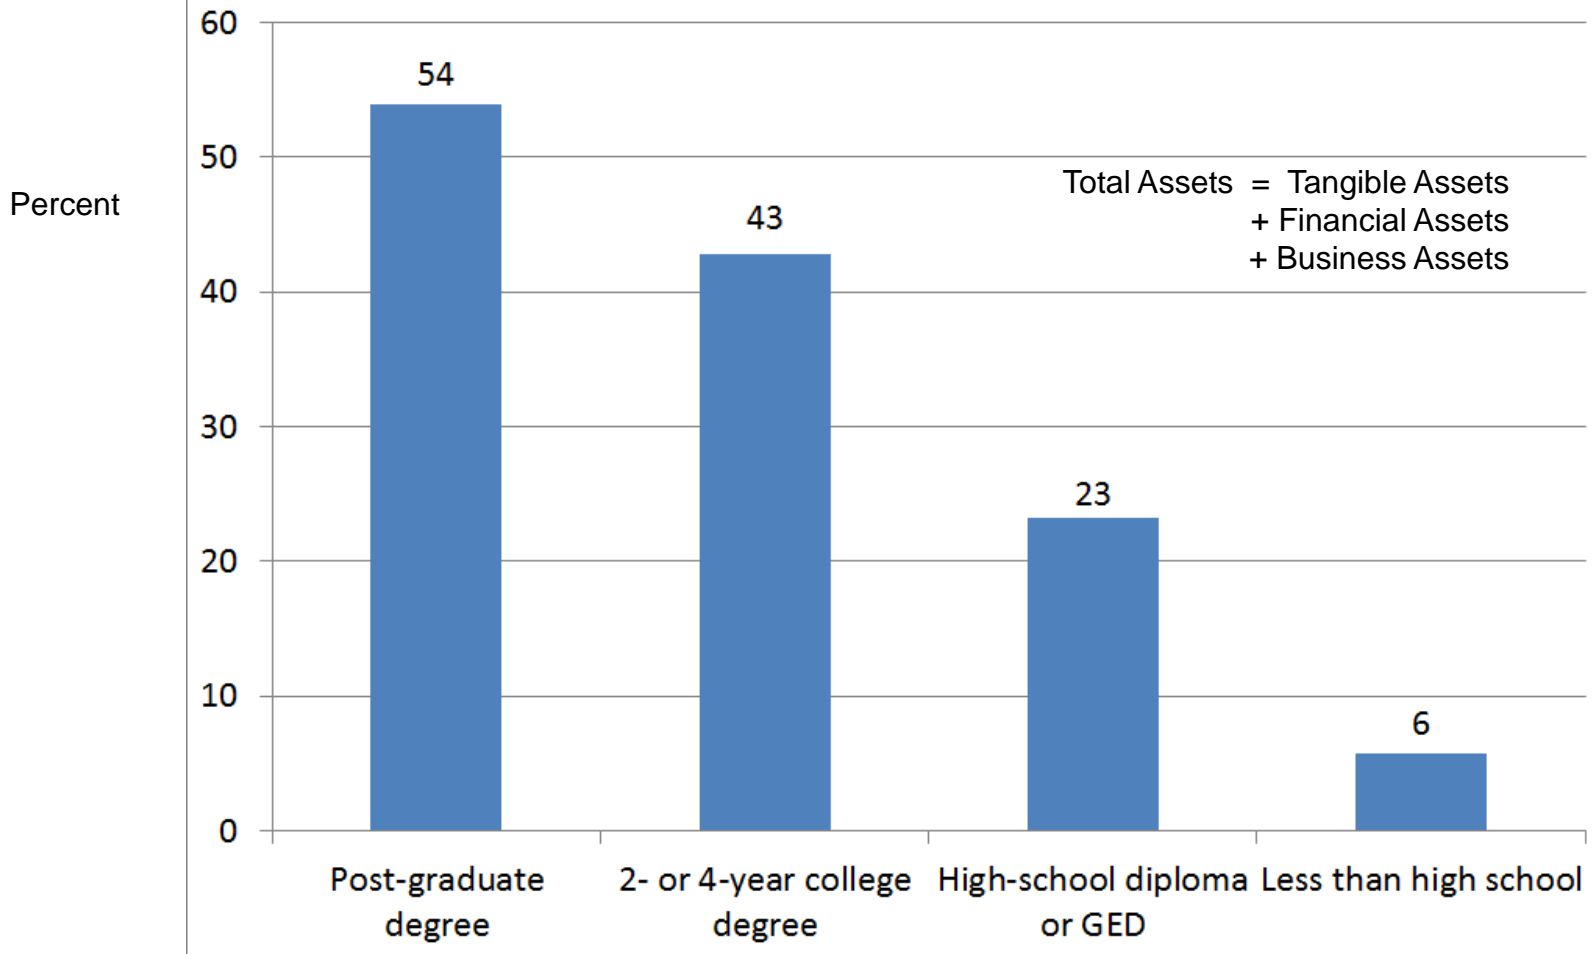

Theory 2

Education Predicts Asset Diversification, Which Is Associated With Greater Wealth

Median Asset Share in Financial or Business Assets, 2013

Correlation vs. Causation: Three Theories

Theory 1

Theory 2

Theory 3

- Cognitive ability
- Non-cognitive traits (“grit”)
- Socio-economic status
- **Education itself**
- Education by-products
 - Educated spouse
 - Incentive to become financially savvy

In Sum: Education and Wealth Are Correlated But Causal Link May Be Weak

- **Some—perhaps much—of the education-wealth correlation is spurious.**
 - **That is, education alone does not cause wealth accumulation; a college degree is not magic.**
 - **Rather, many factors (ability, socio-economic status, grit) affect *both* educational attainment and wealth.**
- **Therefore, educational attainment alone may be a weak policy instrument for widening and equalizing the distribution wealth.**
